

A Direct domain-evidence observability

B Validation–observability regimes

C Charge-status decomposition

D

Representative evidence-state examples

validated not observable

MOSAEC · metal Zn · trust 0.76 · observability 0.40
 trusted source; oxidation/charge fields
 are not directly observable

uncertain observable

QMOF · metal Cd · trust 0.64 · observability 0.40
 some chemistry evidence is visible, but
 validation/charge evidence is incomplete

flagged or inconsistent

MOSAEC · metal Ag · trust 0.28 · observability 0.60
 non-zero charge is uncertain and oxidation
 state is not directly observable
